

Write a simple Python menu-driven program to find the area of Circle, Rectangle, and Square. Get the required inputs from the user, calculate and display the area. Include an Exit option and an Invalid choice message.

main.py

Output

```
1 while True:
2     print("\n1. Area of Circle")
3     print("2. Area of Rectangle")
4     print("3. Area of Square")
5     print("4. Exit")
6
7     choice = int(input("Enter your
choice: "))
8
9     if choice == 1:
10        radius = float(input("Enter
radius: "))
11        area = 3.14 * radius * radius
12        print("Area of Circle =",
int(area))
13
14        elif choice == 2:
15            length = float(input("Enter
length: "))
16            breadth = float(input("Enter
breadth: "))
17            area = length * breadth
18            print("Area of Rectangle =",
int(area))
19
20            elif choice == 3:
21                height = float(input("Enter
height: "))
22                area = height * height
23                print("Area of Square =",
int(area))
24
25            elif choice == 4:
```

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice: 3
Enter height: 4
Area of Square = 16
```

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice: 56
Invalid choice
```

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice:
```
